It will not affect operations. The number of inoperable is a good number. There were some systems that didn't have a county listed in the data base and when they did QA/QC some were added in. However, they are all operational. It also sounds like they are going back and counting systems in counties declared but weren't impacted. So when they add them, they are all operational. I believe the Kelly is going to start to focus on reporting only nonoperational systems.

Please note that starting today with the new data corrections we are tracking more WW facilities. I changed to 1,500 in today's report to give us a little wiggle room as sites are entered for the first time. I am still waiting for the validation list from OW, which will nail it down.
